

## **Task 2 Data Anonymization**

Tasks Assigned: -

We need you to anonymize this data to hide personal details while preserving any useful information for the data scientists at InsightSpark.

Here are some examples of how you may anonymize a data set:

You could remove columns that don't provide helpful information for analysis (e.g., names or credit card numbers).

You could mask any columns that can identify an individual (e.g., passport numbers or mobile numbers).

You could categorize personal figures (e.g., age and income) into a bracket rather than a specific number.
